

March 2015

ANALYTICAL TEST REPORTS OF EXTRACTABLE PROTEIN CONTENT

JPL LATEX SWIM CAPS, WRIST BANDS & EXERCISE BANDS

To whom it may concern

Please accept this letter and the reports included as validation of the low protein content of the JPL Latex Swim Caps, Wrist Bands & Exercise Bands

Normal Centrifuge Latex has at least 600ppm protein content which is the cause of the allergenic nature of latex products.

In the manufacturing process of JPL Latex Swim Caps, Wrist Bands & Exercise Bands, every effort is made to remove the extractable protein content to make the protein level as low as possible.

The test reports included with this document provides the results for two samples laboratory tested in March 2015. Sample 1 gave a result of 220ppm with sample 2 resulting in 189ppm. Therefore the protein level in these latex products averages 195ppm which is just 0.002%.

To conclude, JPL Latex products as manufactured by Perusahaan Sindi Sdn Bhd in Malaysia, for non-medical use, 0.002% of protein content is considered extraordinary low to meet its intended purpose.

Yours sincerely,

JPLennard
